

Marking Rubric - Grade 9 Physical Science - Forces and Motion - Short Test

C1 (Q1) Multiple choice, answer key C

1 mark, right or wrong. Marked by key lookup.

C2 (Q2) Multiple choice, answer key B

1 mark, right or wrong. Marked by key lookup.

C3 (Q3) Multiple choice, answer key C

1 mark, right or wrong. Marked by key lookup.

C4 (Q4) Why the book is not accelerating

Full (3): Names the weight (gravity) pulling down AND the normal (support) force pushing up, AND says they are equal so the net force is zero.

Adequate (2): Names both forces, but does not say they are equal or that the net force is zero.

Limited (1): Names only one force, or says the table or ground 'stops' the book without naming forces.

None (0): No relevant force named, or a claim that contradicts the answer.

C5 (Q5a) Cyclist: forward force compared with resistive force, answer key B

1 mark, right or wrong. Marked by key lookup.

C6 (Q5b) Why the forces are equal

Full (3): States that the net force is zero AND links this to the steady (constant) speed, for example by Newton's first law.

Adequate (2): Says the forces balance or cancel, but does not link this to steady speed.

Limited (1): Mentions friction or the pedals, but gives no reason about balance or steady speed.

None (0): No relevant reason, or a reason that contradicts the answer.

Grade policy (plain language)

Each question's mark is the sum of its rubric lines. The test total is out of 10 points (four 1-point multiple-choice lines and two 3-point written lines). 8 or more is an A, 6 or more is a B, 4 or more is a C, 2 or more is a D, below 2 is an F.
